

Data Collection and Preprocessing Phase

Date	15 June 2024
Team ID	740185
Project Title	Loan Sanction Amount Prediction Data With ML
Maximum Marks	6 Marks

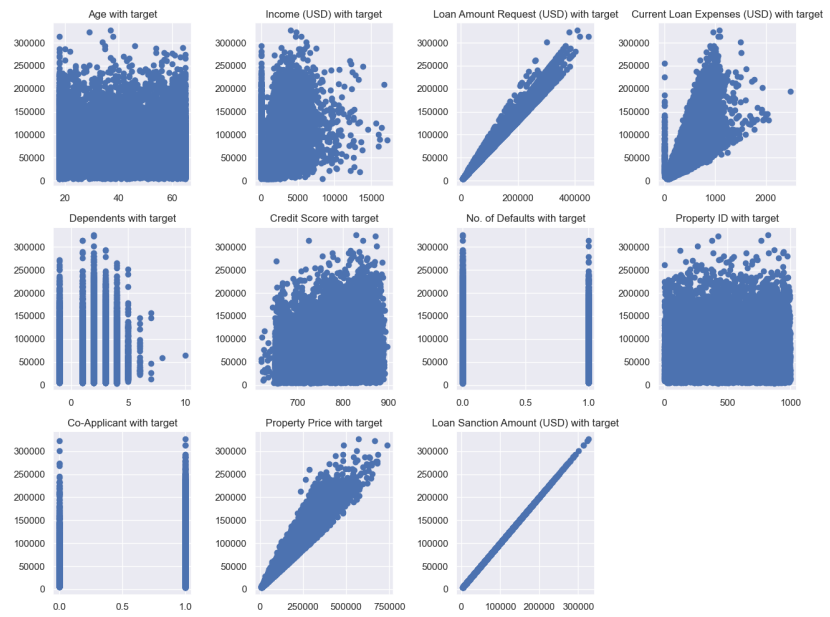

Data Exploration and Preprocessing Template

Data Exploration and Preprocessing Template

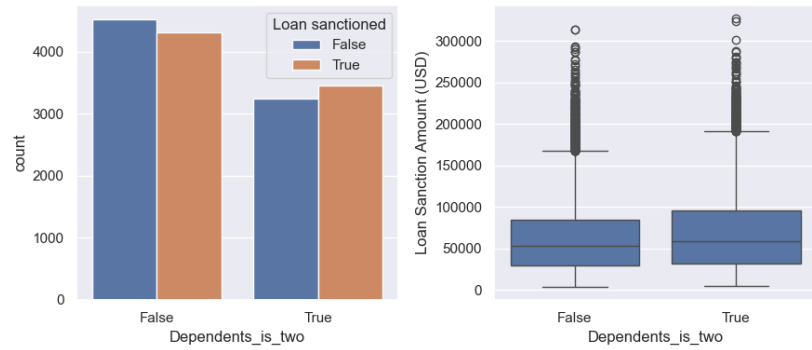

Dataset variables will be statistically analyzed to identify patterns and outliers, with Python employed for preprocessing tasks like normalization and feature engineering. Data cleaning will address missing values and outliers, ensuring quality for subsequent analysis and modeling, and forming a strong foundation for insights and predictions.

Section	Description
Data Overview	<p>Dimension: 8 rows x 131 columns</p> <p>Descriptive statistics:</p>  <p>The screenshot displays a Jupyter Notebook interface with the following content:</p> <ul style="list-style-type: none"> Basic Overview: A code cell showing the loading of the dataset into 'train_default' and 'test_default' variables. train_default.describe(): A table showing summary statistics for the training dataset across 131 columns. The columns include Age, Income, Loan Amount Request, Current Loan Expense, Dependents, Credit Score, No. of Defaults, Property ID, Property Age, Property Type, Co-Applicant, Property Price, and Loan Sanction Amount (USD). The statistics provided are count, mean, std, min, max, and 50%, 75%, 90% percentiles. test_default.describe(): A table showing summary statistics for the test dataset across 131 columns. The columns include Customer ID, Name, Gender, Age, Income, Income Stability, Profession, Type of Employment, Location, Loan Amount Request, Current Loan Expense, Expense Type 1, Expense Type 2, Dependents, Credit Score, No. of Defaults, Has Active Credit Card, Property ID, Property Age, Property Type, and Property Location. The statistics provided are count, min, max, and 50%, 75%, 90% percentiles.
